Replace the VHS or DVD recorder in your SeeSnake with a PIPE PAL 1 and enjoy the benefits of enhanced work flow and a better product for your customers.

Pipe Pal 1 allows you to type 8 lines of text on screen, without interfering with the screen's existing date, time and distance information. Pipe Pal 1 encourages the use of saved pages that can be filled out like forms, with simple, intuitive operation making it suitable for all users. On-screen help is always available to assist with text editor and recorder operation.

Pipe Pal 1 is supplied with a waterproof, washable USB computer keyboard.

Multiple work-flow options.

Example 1.

Pre-load USB flash drive with supplied media player software.

Record the survey of a blocked/damaged drain. The opening text page shows contractor, customer, address, operator, brief job description. Record the survey of the repaired/cleaned drain. Give the USB drive to the customer as their record of the job.

If you have the USB drives printed with your company details, the customer carries your advertising on an item of continuing value to them...

Example two

Record the day's work onto a USB flash drive (six hours recording on an inexpensive 8 Gig drive).

Later, use the included software to burn the video clips onto DVD.

You can also keep a backup copy of every job for future reference, either on DVD or your hard drive.

Multiple recordings can be easily put on a DVD with automatic menu generation and seamless replay.

PIPE PAL 1 is designed, manufactured and supported in New Zealand by Video Engineering 1996 Ltd
